Live test - Impact of RF waves on the human body!

Impact test in real conditions of a cell tower on a person sensitive to RF waves!

Philippe TRIBAUDEAU, a former technology teacher, is ultra-sensitive to electromagnetic waves and environmental pollution. When exposed to electromagnetic fields, his brain "burns"; this unbearable suffering has led him to live in reclusion for over 8 years; he has found refuge in a white zone in the Vançon forest, near Sisteron (04).

The announcement by the prefecture of Dignes-Les-Bains on December 28 of the commissioning of a relay antenna close to his place of life after months of discussions with Mr. Tribaudeau and the Association Zones Blanches, is incomprehensible. This measure is a bombshell.

Provocation test in real conditions on a person extremely sensitive to waves in order to assess the impact on his health!

How will his body react? Is his life in danger? Are the biological effects measurable?

Mr Tribaudeau and the independent associations A.R.I.E.M. and AZB are going to transform the commissioning of the antenna by the prefecture into a provocation test in real conditions, to measure the effects.
